Gabo Esquivel

Senior Web3 Product Engineer

I build blockchain applications that connect smart contracts and onchain data to usable products. My work includes trading interfaces, wallets, token auctions, bridges, and indexing systems across EVM and Antelope networks. I have 15+ years of software experience, including blockchain engineering since 2017. Fluent in English, Spanish, Portuguese, and Italian.

Highlights

- Built blockchain applications across Ethereum, Arbitrum, Polygon, EOS EVM, and Antelope
- Developed wallet integrations, token bridges, auctions, and trading interfaces
- Wrote blockchain indexers using Ponder, Moralis streams, Node.js, and viem
- Helped launch EOS mainnet and developed validator and private-chain infrastructure

Experience

Product Engineer, Bitlauncher

Remote • Full-time • Nov 2023 – Nov 2025

AI and crypto launchpad combining token auctions, wallets, cross-chain transactions, indexed data, and research assistants.

- Owned product and technical direction for the launchpad from concept through delivery.
- Implemented bridge flows for USDT, USDC, and BITUSD into protocol tokens.
- Deployed Gnosis auction contracts to EOS EVM with a realtime bidding interface.
- Wrote a custom EOS EVM indexer with Node.js and Viem event subscriptions.

Software Engineer, Opyn

Remote • Contract • Oct 2024 – Feb 2025

Opyn Markets perpetuals trading interface on Arbitrum, with integrated wallets and indexed blockchain data.

- Built the Next.js 14 trading interface with React Server Components.
- Integrated the protocol and Arbitrum testnet with viem and wagmi.
- Indexed onchain data with Ponder, PostgreSQL, and Supabase.

Software Engineer, ZTX

Remote • Full-time • Aug 2022 – Aug 2023

A Web3 virtual-world application with embedded EVM wallet connectivity, NFT trading, and transaction signing.

- Developed a WebGL EVM wallet connector with MetaMask, Ethers.js, and a custom JavaScript event system.
- Set up the Next.js app that hosted the virtual world, with Tailwind and Framer Motion.
- Wired signing and NFT trading so the wallet session lived inside WebGL.

Software Engineer, RareMint

Remote • Full-time • Jul 2021 – Dec 2022

A Polygon NFT marketplace for tokenized sports collectibles, auctions, wallet connectivity, and collectible drops.

- Wrote an NFT indexer with Moralis streams, Node.js, and PostgreSQL on Google Cloud.
- Refactored the marketplace with Next.js SSR, Tailwind CSS, and GraphQL.
- Integrated WalletConnect and supported the Slab Series Pokémon mystery-pack drop on Polygon.

Lead Engineer, Bitcash

Remote • Part-time • Jan 2020 – Jul 2021

Cryptocurrency and stablecoin exchange with peer-to-peer trading, realtime messaging, and browser-based signing.

- Set up the React, Vite, Node.js, PostgreSQL, Hasura, and Google Cloud stack.
- Built the peer-to-peer exchange, realtime chat, and matching engine.
- Wrote a realtime EOS indexer with Node.js worker threads, binary deserialization, and PostgreSQL.
- Implemented WebAuthn key management for in-browser transaction signing without an external wallet.

Additional experience

Earlier blockchain work includes Knowledge's Ethereum token platform (2017–2018), EOS Costa Rica's validator and private-chain systems (2018–2020), Emanate's token-based music platform (2019–2020), and ChainGraph's open-source blockchain indexing toolkit (2020). Outside Web3, I led engineering for Wink's neobank (2015–2018), built an AI legal assistant at LegalAgent (2025), led frontend work at AMC Networks (2012–2014), and developed American Express marketing applications (2010–2012).

Connect

Open to direct hire, international hire, or contracting through Blockmatic Labs LLC. Cannot work under W-2. Based in Costa Rica, working US Mountain Time. Fluent in English, Spanish, Portuguese, and Italian.
